

What is the DisPatch Rack?

Currently available in a 36U configuration, the *DisPatch* Rack provides a single location for the security hardware used to protect an industrial control system network. The FoxGuard team configures each device, integrates all equipment in the rack, and performs a thorough quality inspection in a secure test lab before shipping. This ensures a smooth and easy implementation. The rack has locking doors and a five year warranty. It is delivered in a crate with a ramp for unloading.

Sample Rack Configuration
